

COVID-19 INFORMATION

“BUT IN HUMILITY CONSIDER OTHERS AS MORE IMPORTANT THAN YOURSELVES”
PHILIPPIANS 2:3

IF YOU HAVE BEEN NEAR SOMEONE WHO TESTED POSITIVE FOR COVID-19, YOU ARE AT RISK IF:

- **YOU HAVE BEEN WITHIN 6 FEET OF THIS PERSON**
- **YOU HAVE SPENT 15 MINUTES OR MORE WITH THIS PERSON**

WHAT DO I DO IF I HAVE BEEN IN CONTACT WITH SOMEONE WHO HAS TESTED POSITIVE?

- **Stay home for 14 days.** Even if you do not have symptoms, you may still spread the virus to others.
- **Wait at least five days before you get tested.** If you test too soon, you may get a false negative test result. If you properly test and are negative, then you can end quarantine after seven days instead of 14.
- **If you live with someone who has tested positive, you must stay longer.** Continue to quarantine another 14 days **after** their quarantine ends. This means you may **quarantine for 24 days.**
- If you are vaccinated, you do not have to quarantine **ONLY IF** you were exposed 14-90 days **AFTER BOTH** vaccinations **AND** have no symptoms.

WHAT DO I DO IF I TEST POSITIVE FOR COVID-19?

- **Stay home for 10 days** after symptoms appear **AND** until you are free of symptoms for at least 24 hours.
- **Tell anyone you have visited** in the past two weeks to stay home after five to seven days.
- Treat your symptoms by:
 - Staying hydrated
 - Taking Tylenol for fever
 - Calling your doctor and telling them you have COVID-19. Most likely they will have you stay home and to monitor any symptoms related to COVID-19.
- **All family members should stay home.** If you need supplies, consider getting items delivered to your home or asking a friend/ servant to drop off supplies at the front of your door.

HOW LONG DOES THE VACCINE TAKE TO WORK?

- The Pfizer and Moderna vaccine only protects you after you receive **both** doses.
- The vaccine does not protect you right away. It takes **two weeks after the second vaccination.** Note that the J&J vaccine is only one dose.
- You can still carry the virus and infect other people, even after both doses.
- It is important to **continue wearing a mask**, washing your hands, and staying 6 feet apart even after you are vaccinated.
- if you've already had COVID-19, wait three months to take the vaccine.
